Steps to Consume API

Step 1: Create an account

Create an account at [AuthServer](#) with a valid email ID. A separate document has been shared about steps to register at the portal.

Step 2: Verify your email

After the successful registration, a verification link will be sent to your email. You will have to click on the link to verify your email address.

Note: It is mandatory to verify your email before proceeding.

Step 3: Approval by Admin

Once the email is verified, it is then approved by the Administrator from our team. After the approval you will receive the Access token and password on your registered email address.

Step 4: Calling the API

You can now use the access token provided to call the APIs. While making the request, access token will be sent in headers with key "Authorization" and value "bearer <access_token>" along with the request body in JSON format. A detailed documentation is provided separately.

Note: Please make sure to call the API with the machine/system having the same IP address as provided at the time of registration.
